Agriculture Services and Solutions
Mobile | Web | Desktop | Enterprise

Industry Served
Agriculture

Use Cases
Land and Asset Management
Data Analysis
Operational Awareness
Communication with Constituents
Field Data Collection
Location Enablement

Solutions & Services
Database Design and Implementation
Analytical Process Design and Model Creation
Web and Mobile Application Support
System Integration
Knowledge Transfer

Product Knowledge
Amazon Web Services, Oracle, SQL Server, Windows, Mac, JavaScript, iOS, WPF, Android, Windows Mobile, jQuery, .NET, Dojo, HTML 5, ArcGIS Enterprise

Feeding the world is a big responsibility. Agriculture companies, large and small, rely on Swova to help them successfully implement Esri's location platform to support their data integration, management, and analysis workflows as well as web and mobile application needs to improve how they do business.

Challenge
Having a robust understanding of the land, resources, and climate that your crops rely on can support the decision making process and lead to better crop yields; however, having access to all of this information can be a daunting task. Integrating information from disparate and big data systems is a challenge. Identifying applications that provide streamlined workflows and successfully tie into the enterprise can be difficult.

Solution
Implementing a location platform to support your business improves field operations, planning and analysis, and provides a clearer understanding of resources. This allows Ag operations to better plan for and allocate resources resulting in higher crop yields. Swova's professional and technical services can support the planning, design, and implementation of a location platform. We provide complete, end-to-end solutions aimed at your organization's requirements.
